-
-

Tips To Get The Most Out Of This Call

1. Print this Action Guide
2. Use these tips to develop your blog.
3. Take action NOW –

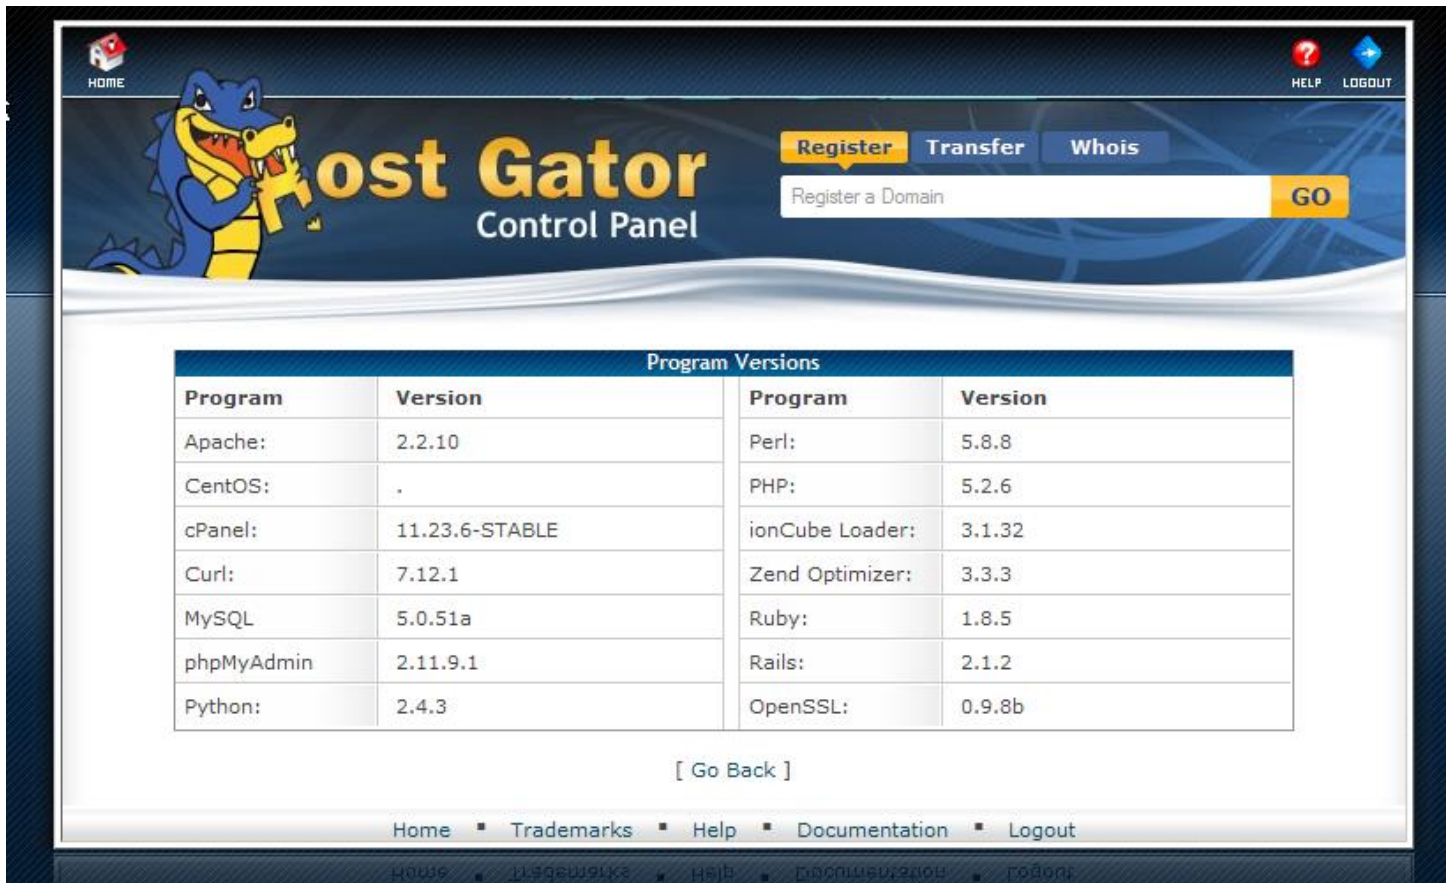

Quote of the Call: “Prepare and prevent, don't repair and repent. “
~Author Unknown

Today you will learn and discover:

- **What is security**
- **Limiting Access**
- **Containment**
- **Knowledge**

What is security

Fundamentally, security *is not* about _____ and _____, which might well be impossible to find and/or maintain. Security has more to do with _____ and _____.

The screenshot shows the Host Gator Control Panel interface. At the top, there is a navigation bar with 'HOME', 'HELP', and 'LOGOUT' links. The main header features the Host Gator logo (a blue and yellow gator) and the text 'Host Gator Control Panel'. Below the header, there are buttons for 'Register', 'Transfer', and 'Whois', along with a search box for 'Register a Domain' and a 'GO' button. The main content area displays a table titled 'Program Versions' with two columns: 'Program' and 'Version'. The table lists various software versions, including Apache, CentOS, cPanel, Curl, MySQL, phpMyAdmin, Python, Perl, PHP, ionCube Loader, Zend Optimizer, Ruby, Rails, and OpenSSL. At the bottom of the table, there is a '[Go Back]' link. The footer of the control panel includes a menu with 'Home', 'Trademarks', 'Help', 'Documentation', and 'Logout'.

Program Versions			
Program	Version	Program	Version
Apache:	2.2.10	Perl:	5.8.8
CentOS:	.	PHP:	5.2.6
cPanel:	11.23.6-STABLE	ionCube Loader:	3.1.32
Curl:	7.12.1	Zend Optimizer:	3.3.3
MySQL	5.0.51a	Ruby:	1.8.5
phpMyAdmin	2.11.9.1	Rails:	2.1.2
Python:	2.4.3	OpenSSL:	0.9.8b

The Apache HTTP Server Project is pleased to announce the release of Apache HTTP Server, version 2.2.10. This release represents ten years of innovation by the project, and is recommended over all previous releases! In particular, this release fixes a few potential security vulnerabilities.

For details see the [Official Announcement](#) and the [CHANGES 2.2](#) and [CHANGES 2.2.10](#) lists

Add-in modules for Apache 1.3 or 2.0 are not compatible with Apache 2.2. If you are running third party add-in modules, you must obtain modules compiled or updated for Apache 2.2 from that third party, before you attempt to upgrade from these previous versions. Modules compiled for Apache 2.2 should continue to work for all 2.2.x releases.

Limiting Access

Making smart choices that effectively lower the

available to a malicious person.

Containment

If a weak point in your installation is found by a malicious person, your system should be configured to minimize the amount of damage that can be done once inside your system.

Knowledge

Keeping _____, knowing the state of your WordPress installation at regular time intervals, _____ your modifications all help you understand your WordPress installation.

Backup Options

What to do with the backup file:

- Save to server (wp-content/backup-7d79b/)
- Download to your computer
- Email backup to:

Backup!

Scheduled Backup

Next Backup: December 3, 2008 @ 9:21 am

Schedule:

- Never
- Once Hourly
- Once Daily
- Once Weekly

Email backup to:

Resources for your next steps:
